Python Test Task – ProfiSea

To write code that will parse the attached file and will:

1) To parse all the global parameters from the section Configuration and save in appropriate data structure

2) To parse Components section named Tagger and save in appropriate data structure

3) To Parse Flows section of the last Flow and to print each action name from this flow as a separate line with the values of the required parameters – part of them from the Action section and part of them from the Global Parameters
